

## Transport Monitoring

### In transit or storage, you're in control

Mesa understands the unique demands of the Transportation industry. Our solution is fully validated and scalable to meet your changing requirements.

### Transport

The Mesa Transport Solution provides real-time monitoring of fleet conditions, including geolocation, geofencing, reefer unit run times and door status. Product conditions such as temperature and humidity are also monitored in-transit. For complete end-to-end product monitoring, our Transport Solution has been designed to integrate seamlessly into our broader storage and transport capabilities. Infitrak combines all aspects of monitoring for temperature sensitive products across warehousing, transportation, or as part of a last mile shipment.

### Accessible

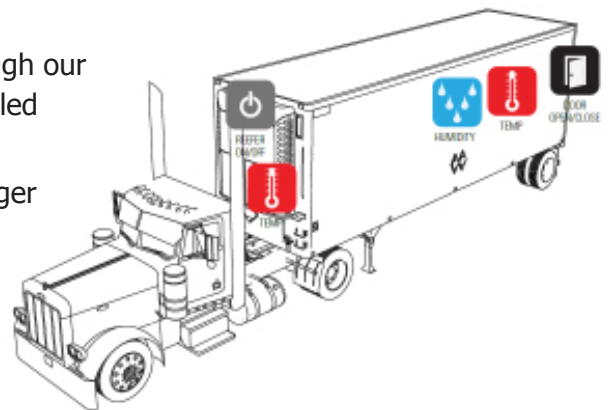

We understand that your fleet and product information needs to be secure and easily accessible. Mesa solutions provide automated data collection, transmission and reporting both on the road and in your storage environments. All reporting is accessible to you over a standard web browser 24/7 including out-of-range alerts, keeping you in full contact with your fleet and the products they are transporting. Our multiple wireless technologies are cost effective and easy to install.

### Compliance

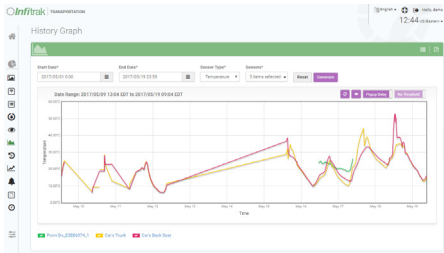

The Mesa transport solution is designed to keep you in compliance with the stringent pharmaceutical and food guidelines that regulate the transportation of sensitive goods. These include, Health Canada 0069, FDA 1079 and is 21 CFR part 11. In addition, our system is fully validated for use in the pharmaceutical industry.

### Key Solution Benefits

- Get real time information on fleet location and load status
- Provide accurate delivery times including important temperature history to your customers
- Important fleet information is accessible through our web based portal by almost any internet enabled device
- Integrate with Mesa's warehouse and datalogger solutions to maximize value
- Improve delivery times

# Cold Chain - Transport Monitoring

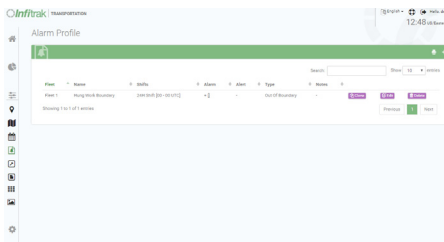

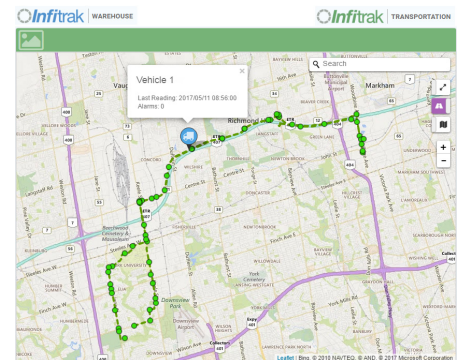

## Realtime Monitoring of Fleet

- Provide real time temperature information
- Provide real time door status (open/ close)
- Provide real time reefer status (on/ off)
- Reports can be easily generated for documentation and audit purposes
- All reports can be exported to Excel or sent as a scheduled email
- 2 years of historical data is available from a simple click of the mouse

## Geo Locating and Geo Fencing

- Provide an accurate and visual representation of all trucks in fleet and their locations
- Easily identify out of range events including their locations
- Use Geo fencing to notify when a truck arrives at delivery location
- View important daily and historical route information

## Alerts and Audit Trail (Alarm Set up)

- Notify multiple people of out of range events via email, SMS text or phone call
- Tiered alerts provide enhanced notification of out of range events
- Document alerts and corrective actions for compliance and regulatory requirements
- Set up daytime or after hour alerts depending on your responsibility
